### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Sudarshan on 5/7/10.

The application has been amended as follows:

Please cancel claim 9.

In claim 1, line 31, please replace [[may undergo]] with "undergoes".

In claim 1, line 34, please replace [[fluid]] with "liquid".

In line 1 of claims 4 and 10, please insert "any one of" before "claims".

In line 1 of claims 5-8, 11 and 12, please replace [[the claims]] with "any one of claims".

2. The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest the claimed process. Sun, et al. ("Compound Core-Shell Polymer Nanofibers..." 2003) generally describes the use of electrospinning, a process involving concentric tubes, in order to possibly create hollow tubes or compound fibers. The process uses two concentric tubes and two liquids and an inner electrode.

Art Unit: 1793

However, Sun, et al. does not mention the use of electrified capillary tubes or offer flow rates appropriate to create nanotubes or nanofibers. Applicants own work, Loscertales, et al. ("Electrically Forced Coaxial Nanojets..." 2004) also discusses the general process of creating fibers and nanotubes through use of electrospinning but neither work on its own or in combination with another reference would have made it obvious to one of ordinary skill in the art to perform the claimed invention with electrified capillary tubes and specific voltage and flow rate ranges.

Ripoll, et al. (US 2004/0069632), also applicants' own work, contains a process which most closely matches the process of the instant claims. However, the process yields capsules and there is no suggestion of modifying the process to produce nanofibers or nanotubes. Ripoll '632 demonstrates that even if a process uses electrified capillary tubes and a similar set-up as the instant claims, that the product may not necessarily create nanofibers.

Therefore, the prior art does not teach or suggest the instantly claimed process, using electrified capillary tubes and specific flow rates, in order to create nanofibers.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DIANA J. LIAO whose telephone number is (571)270-

Art Unit: 1793

3592. The examiner can normally be reached on Monday - Friday 9:30am to 6:00pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
